

3 1/2" (89 mm) Apparatus Test Gauge Kit

STYLE ATGK-3

This Test Gauge Kit is to be used in conjunction with annual apparatus pump testing or for checking the accuracy of pump panel gauges.
 Former style: TKG-3

Features

The ATGK-3 Test Gauge Kit has a convenient space between the pressure and vacuum gauges. This space is for remote mounting of the pressure gauge from Akron's Apparatus Flow Test Kit (AFTK-25). Once mounted in the designated area, the gauges are easy to reference during a pump test.

- Space for an extra gauge to be mounted (Requires RG-230 remote assembly)
- 36" test hoses, connect directly to underwriters test fittings (Style 44)
 *1/4" male swivels for fast and easy connections to apparatus test fittings
- +-1% accurate, 3 1/2" diameter, freeze protected liquid filled gauges
- 0-30", .5Hg increment vacuum and 0-400, 5 psi (34 kPa) increment pressure gauges
- The gauge mounting plate is made from 1/4" black PVC foam board. The top of the mounting plate has a double break so it may be hung from the top of the apparatus gauge panel, hooked over gauge snubbers or other handles making the test gauges easy to reach and read.
- Heavy-duty carrying case
