ALLROUNDER®
concept

Bronto Skylift, the Market Leader

by Experience: over 5500 aerial appliances in operation all over the world

by Variety: over 30 different models with working heights from 16 to over 100 meters

by Technology: the best weight-height ratio based on advanced plasma welding methods

by Operational Versatility: high degree of customization, over 2000 optional features available

ALLROUNDER®

The ALLROUNDER® concept allows for adding all conventional aerial capabilities to those of a conventional fire truck thus creating a significantly more versatile vehicle, without adding to the running costs. The ALLROUNDER® allows for high customization of the vehicle in order to comply with the operational requirements of most environments.

ALLROUNDER® can be effectively used as

- front line water tender
- high rise rescuer / fire fighter
- light tower
- high rise ventilation tower
- unmanned extinguishing tower
- crane

thus considerably increasing the utilization of the vehicle.

As a water tender the unit can be equipped with midship or rear mounted water pump up to 6000 l/min with single/multi pressure and a large water and foam tank up to 11000 l. ALLROUNDER® units have integrated corrosion-resistant water way.

Added aerial capabilities:

- Max rescue height up to 30 m
- Continuous rescue capability by platform with 3-men capacity, safe working load up to 270 kg
- Mass rescue with rescue ladder
- Automatic levelling of the vehicle by one-push button

Interactive control system

- Visual guidance for aerial operations
- Fully proportional controls for all aerial movements
- Smooth adjustable and customizable take-offs and slow-downs
- Visual trouble-shooting system

Features

ALLROUNDER® has compact overall dimensions.

ALLROUNDER® units are designed to fit onto all commercial chassis with 2 or 4 door cab.

Fully customized bodywork designs available from your local partner.

Integrated rescue ladder according to the latest European Norm.

Control center can be attached to rescue platform, turntable or outrigger control center or used as a portable unit.

UP TO 10TH FLOOR HEIGHT
