

"Full Featured Siren and Light Control"

The **SC-407 ENFORCER** combines the elements of a full featured siren with the light control capabilities of a switch box with a slide switch in a single, integrated and economical system. Coupling 200 watts of siren output and 140 total amps of light control capacity, the **ENFORCER** gets the job done by utilizing traditional, dependable and simple to operate controls even in the most demanding driving situations. The new, astetically pleasing appearance of the **SC-407 ENFORCER**, it's compliment of features, and it's affordable price make this Light Control Siren an attractive buy.

The **SC-407 Enforcer** includes several time-tested features that make this unit one of the most reliable and logical units to choose from. The following is a brief description of several of those features:

- Rocker Switches for Siren Tone and Auxiliary Light Control: The two red oversized rocker switches provide simple, intuitive control of the siren's on/off function and tone output with just a simple touch of your finger. Four illuminated rockers supply up to 80 amps of auxiliary light control.
- **Pursuit Lever/Slide Switch:** Configured for progressive activation of lights, the four position lever/slide switch provides pursuit ready control of the vehicles primary lights and optional siren wail in the last position.
- **Minimal Heat Generation:** The siren's unique and efficient design layout of the printed circuit boards creates less heat eliminating the need for vent holes and lengthening the expected life of the board components.
- Separate Radio & PA Face Mounted Volume Controls: Two rotational volume controls with compact knobs accessible on the face allow for separate control of the output volume of the Radio when re-broadcasted over the siren speaker and PA giving the operator greater flexibility to set the needed volume levels based upon the noise level of the surrounding environment at the time of use.
- Simple, Secure Wiring and Connections: A detachable plug with screwdown terminals for siren connections and leads for secure splicing to connect to the light switches.

The SC-407 ENFORCER gets the job done.

Features

- 100/200 watt amplifier with 140 amps of light control
- Lever/slide switch with 30 amps capacity per circuit and 60 amps total capacity
- 4 Illuminated rocker switches with 20 amps capacity per switch and 80 amps total capacity
- 2 Oversized rocker switches for siren tone control and On/Off and Radio control
- 2 Momentary push buttons for Manual control and override Phaser and Air Horn control
- PA override with noise-canceling microphone and a dedicated volume control on the face of the unit
- LED backlit for nighttime visibility
- Horn Ring Cycler 2 (HRC2) for hands free siren control for pursuit and rescue situations
- Siren Cutout disables the siren tone when exiting the vehicle
- Internal fuses to protect the siren
- Jumper programmable options
- Detachable plug connector with screwdown terminals for the siren
- 10-14 AWG leads for the lever/slide switch and auxiliary switch light control inputs and outputs
- Mounting bracket for the siren and PA microphone
- No-hassle 5-year limited warranty
