**ABOUT THE FLIP TIP SERIES**

The FLIPTIP is two nozzles of choice combined into a single, easy to use, economical handheld nozzle. Choose from three different configuration types:

**FLIPTIP® TIP Only**

The Tip-Only Model is an ideal choice for an addition to any ball valve shut off. Integrating your choice of two smoothbore combinations, the FLIPTIP quickly and positively allows the initial attack team a choice of flows as well as outstanding stream performance.

**FLIPTIP® with Integrated Ball Shutoff**

Integrated with a high volume ball shutoff, the combination FLIPTIP provides a single nozzle that offers a choice of hard hitting straight streams. The detent style ball shutoff allows positive operator control and the rugged durability of Zytel polymer handles and pistol grip.

**FLIPTIP® with Integrated Ball Shutoff and G-Force Nozzle**

Integrated with a high volume ball shutoff and your choice of G-Force combination nozzle, the FLIPTIP provides a single nozzle that offers both a hard hitting smoothbore and high performance combination nozzle. Choose from Fixed, Selectable, or Automatic and a range of operational pressures and fog tooth designs.
