[TRANSFORMER PIERCING NOZZLE SERIES VIDEO \(MP4\)](#)**ABOUT THE TRANSFORMER**

The Transformer Piercing Nozzle System is designed to deliver water or foam solutions to areas inaccessible to the fire fighter. A series of jets near the piercing point apply a wide reaching pattern at a rated flow of 150 gpm at 100 psi (570 l/min at 7 bar). Kits are available with a wide range of optional accessories which include a spinning cellar nozzle attachment. The Transformer system is engineered so that attachments can be added or taken away to configure a piercing nozzle or cellar nozzle to meet the needs of the fireground.
