Aero Super-Deluxe™ Coat and Pants and Aero-Commando™ Coat and Aero-Super Pants™

Enhancing comfort and mobility in proximity systems

Aero Super-Deluxe™ with Bi-Swing Back and Low-Rise Waist Reduces Tugging, Pulling and Bunching

For years, Super-Deluxe™ has been a favorite on the fireground. Now the same features that have made it so popular are incorporated into a proximity ensemble. The pleat on the bi-swing back expands as your arms move forward to eliminate tugging or binding at the shoulder. When your arm returns to a more natural position, the pleat closes to prevent bunching. The low-rise waist design complements the natural contours of your body for superior comfort.

Aero-Commando™ Coat and Aero-Super Pants™ Incredibly Lightweight System that doesn't Sacrifice Safety

The Aero-Commando Coat and Pants create an incredibly lightweight proximity system. This ensemble also incorporates Janesville's industry-leading Freedom® Design features in underarms, elbows and knees for more free and natural movement.

Both ensembles have a para-aramid aluminized knit outer shell that is light, but durable. The outer shell has excellent strength retention when exposed to chemicals, solvents and fuels. It creases differently with each bend to prevent memory from developing at the joints of the outer shell and prematurely degrading the aluminized fabric.
