

Fire Fighting Enterprises at China Fire 2008

The world's leading beam-type smoke detector manufacturer, Fire Fighting Enterprises, will be exhibiting at China Fire 2008 in Beijing.

The company will be at booth A335 from the 28th to the 31st of October, meeting end-users and industry colleagues, and displaying their new Fireray 5000 product.

The Fireray 5000 is a brand new development in beam detector technology, with a motorised auto-alignment feature that greatly eases installation and proceeds to keep the reflected beam operating in the most efficient way. FFE will also be bringing with them the popular F50/100 reflective detectors, the Fireray 2000 end-to-end model, and the heavy-duty Fireray EExd explosion proof version.

With over 600,000 installations worldwide, the company is the largest independent producer of this type of fire protection technology. Beam detectors are ideally suited for wide-area coverage such as warehouses, factories, hotels, shopping centres, indoor car parks and even power stations - such as the enormous Longtan Hydroelectric Dam.

This exhibition, held every other year, is hosted by the China Fire Protection Association, and will be the twelfth such event. China Fire 2006 was hugely successful, attracting hundreds of companies and thousands of visitors from all over the world to the country's capital city to see and exhibit products, exchange ideas and develop relationships within the industry.
